Subject: RE: TCWS

Mr. Campbell,

I appreciate your quick response to my email. What the Tega Cay Community & I are looking for is a quick and decisive edict or action by the ORS and DHEC. Your agencies are charged with ensuring that Utilities Inc. operates effectively and efficiently and that they do not place the customers they serve in harms way. I have attached a letter from Rick Durham, V.P Utilities Inc. dated September 07-2013. The letter makes it abundantly clear that Utilities Inc. has no intention of dealing with the issue straight on. They are and have always been aware of the age of the system and the clay pipes that were used to construct it. They have made a conscious decision, because of monetary concerns, to ignore the larger issues and continue to place band aids on the problem. This has been ongoing for years under the watchful eye of the regulatory and monitoring agencies named above. TCWS has taken responsibility for the spills and the lack of notification to the citizens of Tega Cay. (See Attachment). What the residents and victims of this ongoing dilemma need is for our representatives to express their outrage and indignation with fervor and passion. I am fairly certain that your agency has been aware of these issues as they happened and have been in touch with TCWS regarding them, to date. When you get your response from them regarding the lack of emails and calls feel free to forward it on to me. What I would hopefully expect in the end is that the Residents of Tega Cay find an advocate and partner in the ORS and DHEC with all parties committed to finding solutions and working towards change. Utilities Inc.'s ineptness can not be allowed to continue.

Sincerely,
Martin Camhi

Subject: Message from Rick Durham, Vice President, Utilities, Inc.

Customers of Tega Cay Water Service,

My name is Rick Durham and I am in charge of all water and wastewater operations in South Carolina for Utilities, Inc., including Tega Cay Water Service (TCWS). I am writing you to provide you information on last weekend's wastewater overflows.

Since May, I have been directly involved with the Tega Cay wastewater issues, and during that time I have read numerous correspondence and spoken to residents who say they no longer trust Tega Cay Water Service. Given the historical problems in the design and functionality of the Tega Cay system and the continued news of periodic overflows, I can understand the lack of trust that has developed. Now more than ever, we need to establish communication of exactly what is going on with this system because of the importance it has to the community.

Utilities Inc. (UI), who provides water and wastewater utility service to over 300,000 customers in 15 states, has committed all of its resources to assist TCWS in resolving the wastewater issues in Tega Cay and has tasked me personally with the responsibility and objective to eliminate the potential for future overflows and specifically any reaching the waters in Lake Wylie. We have been working diligently on this objective and have pulled in UI resources from other states to address the inflow and infiltration issues plaguing particularly the older sections of the Tega Cay collection system (sections consisting of clay pipe material).

The total replacement of the Tega Cay collection system would be cost prohibitive. However, we have been able to line the existing pipes where most of the I&I (infiltration and inflow) concerns have been an issue in the past. Since mid 2011, working with a consulting engineer, we have made significant progress inspecting, cleaning, and improving the collection system's ability to handle the waste flow in dry and wet conditions. Our work is not done. Given the nature of this system, additional improvements and a more targeted on-going maintenance plan using more specific history and available technology are needed to prevent the possibility of future overflows that may negatively impact the lake and those who enjoy swimming in its coves.

The three overflows that occurred over a few days around the Labor Day week was a disappointment to all and extremely unexpected. Even with the significant amount of progress we have made to date on correcting the system's deficiencies, we did not expect the blockages that occurred last weekend. **More importantly, we fell short of taking all possible steps to ensure everyone received the notice of the spillage in a timely manner. While we did post "No Swimming" signs around the area of the spills, we did not notify our customers by telephone using our "Voice Reach" system. This automated calling feature depends on accurate phone numbers we have on each of your accounts. I have instructed our personnel to utilize Voice Reach on all "no swimming" advisories in addition to other effective forms of communication to we have available to us. Therefore I ask that if you don't recall recently (or ever) getting a Voice Reach call from us, please contact our customer service office (800) 272-1919 and let the customer service representative know you are calling to update our records.**

We are committed to regaining your trust. We are committed to improving the reliability of the Tega Cay collection system and I will continue to commit the resources necessary until the job is completed. I am committed to making the collection system reliable, and welcome the opportunity to meet personally with any members of the community to discuss the Tega Cay system and to listen to your concerns.

Sincerely,

Rick Durham

Regional Vice President

Mr. Camhi,

This is to acknowledge receipt of your e-mail below regarding TCWS. I have forwarded your e-mail to TCWS and have asked that they provide a response as to why no Voice Reach was sent for a recent boil water advisory and recent sewer spills. Once I have a response, I will contact you.

If you have any questions, please contact me at 1-800-922-1531, ext. 75194.

Sincerely,

Chad Campbell

Office of Regulatory Staff
